PROFILE

I build AI systems and I teach people to use them. On the build side: agentic pipelines on the Claude API, AI-assisted analytics, and web products developed end to end with AI tooling. On the strategy side: a Curtin Festival of AI talk on putting AI in the hands of non-technical professionals, and advising engineers on where AI fits in their projects. I co-founded a robotics-education supplier, so I judge technology the way a client does: by whether it earns its keep.

SELECTED AI WORK

Agentic model tuning

Claude API · Python

Built an agentic loop that proposes hyperparameters, launches training runs, reads the metrics and iterates, with every attempt and its reasoning logged. Result: top marks on Machine Learning and Machine Perception assignments at Curtin. harrys.monster/agentic-tuning

"Single-use software" · Curtin Festival of AI

Speaker

Presented the case for deterministic, disposable AI-built tools: how non-technical professionals can get trustworthy software out of AI in minutes, with worked examples. harrys.monster/single-use-software

AI-assisted analytics

Python · LLM APIs

Build single-use analysis tools that surface and visualise trends in moderate-sized datasets: the working practice behind the talk.

AI-built web products

In build

Developing the WARES storefront and the Robotics West site end to end with AI coding tools. This portfolio site is live and was built the same way. harrys.monster/ai-web-products

Multi-model development environment

Daily practice

Work runs on agent orchestration with cost-aware routing across models, custom skill libraries that encode my methods, cross-model review loops, and AI-generated documentation. harrys.monster/how-i-work

EXPERIENCE

Co-founder & Operations Lead · WARES (West Australian Robotics Education Specialists)

2024 – present

Registered supplier of robotics components to WA schools and universities. I own logistics, supplier relationships and contracts, and I am building the storefront with AI tooling.

Sessional Academic · Curtin University, Mechatronics Laboratories

2023 – present

Teach and troubleshoot in undergraduate labs; advise students on applying AI to embedded-systems projects.

Lead Mentor · FIRST Robotics Competition, Team 4788

2016 – present

Lead 30+ students and 15+ volunteers through a full design-build-compete season each year. National winners, 2018.

SKILLS

AI & LLM: Claude and OpenAI APIs, agentic architectures, prompt and context engineering, multi-model orchestration, evaluation, AI-assisted documentation

Engineering: Python, C++, TypeScript, Java, MATLAB, HTML/CSS/JS, Git, Linux

Strategy & communication: talks and workshops, requirements gathering, teaching, risk assessment

EDUCATION

Curtin University · Bachelor of Engineering (Honours), Mechatronic Engineering & Bachelor of Science, Computer Science. Expected 2028.
